Bilingual Computer Science graduate with experience in data analysis, database systems, and technical project collaboration. Skilled in problem solving, data organization, and working with cross-functional teams. Experienced with SQL, Python, and database-driven projects involving data storage and information management. Seeking entry-level opportunities in Data Engineering, IT operations, or technical support to expand expertise in data systems, infrastructure, and technology solutions.

Education

B.S. in Computer Science December 2025
George Mason University, Fairfax, VA
Overall GPA: **3.52/4.00**

- *Certifications:* ML Foundations Certificate (Cornell/Break Through Tech), May 2025

Experience

Fellow, Break Through Tech AI Studio (Cornell Tech) May 2025 - Present

- Built machine learning models using Python and scikit-learn, applying classification and clustering techniques.
- Performed data cleaning, feature engineering, and model evaluation to improve prediction accuracy.
- Collaborated with cross-functional team members and presented technical findings to mentors, supporting data-driven decision making.

Instructor, CodeAdvantage, Vienna, VA February 2024 - December 2024

- Taught foundational computer science and programming concepts to students using Scratch and ScratchJr
- Developed engaging learning activities and adapted instruction to different learning needs
- Strengthened communication, problem-solving, and mentoring skills through one-on-one and group instruction

Projects

Women’s Health AI Studio Project *GitHub: PPFA AI Studio 2025 Repo + README* May 2026

- Collaborated with a multidisciplinary team to improve chatbot classification performance
- Performed data cleaning, preprocessing, and evaluation to improve model accuracy
- Applied machine learning techniques to support data-driven decision making

Customer and Order Management System Nov 2024

- Designed a relational database and migrated structured data from Oracle SQL to MongoDB using an embedded data model
- Developed SQL scripts for data transformation, organization, and migration while maintaining data accuracy
- Built a Java-based interface to manage and retrieve data efficiently

WiDS Global Datathon: Wildfire Threat Prediction February 2026

- Analyzed wildfire event datasets to predict threat timelines for evacuation zones using machine learning and survival analysis techniques
- Performed data cleaning, feature engineering, and preprocessing to improve model performance and data quality
- Collaborated with team members to evaluate results and support data-driven decision making for real-world scenarios

Process Management and System Calls May 2025

- Extended an operating system kernel to support process creation and lifecycle management using fork() and waitpid(). Improved system reliability by implementing process synchronization and resolving process ID management issues.

Workout Tracking App (SQLite + Firebase) April 2025

- Designed and managed a hybrid data storage system using SQLite and Firebase, implementing data retrieval workflows and optimizing database queries to improve performance and scalability.

Skills

Technical	Python, SQL, Java, MongoDB, Git, Microsoft Office (Word, Excel, PowerPoint)
Data Management	Database systems, data organization, documentation, data tracking
Research & Analysis	Problem solving, data analysis, feature engineering, reporting
Professional	Team collaboration, written and verbal communication, attention to detail, organization
Languages	English (Fluent), Spanish (Fluent)
Honors	Grace Hopper Celebration – Student Scholarship Award Recipient (2023), AnitaB.org
